ABOUT R&F PROPERTIES

R&F Property Australia was introduced to the Australian property market mid-2014. With offices based in Melbourne and Brisbane, R&F Property Australia seeks to make its mark on the property development industry through utilising decades of experience to construct quality buildings perfectly suited to the local market.

Their goal is to revitalise areas that no longer deliver a service to the ever-growing population. Their process involves carefully selecting a parcel of dormant land and giving it a purpose by transforming it into a functional, liveable and superb looking space.

Founded in Guangzhou in 1994, R&F Properties is one of the leading property developers in China. Today the company holds a remarkable property portfolio in many areas outside of its central developments in Guangzhou, with Australia being its most recent.

INNOVATION & VISION

The company’s robust position in the property market is evident and these expansion plans have driven the size and scope of the business to another level. In addition to developing and selling quality private residential properties, the group also:

- Develops, sells and leases commercial and office spaces.
- Engages in other ancillary property-related services including architectural and engineering design.
- Engineering supervision, property management.
- Property agency services.
- Recently diversified their property portfolio by developing hotels and shopping centres.

Now, R&F Property Australia strive to bring this same innovative forward-thinking to develop better cities here in Australia by catering for the local property market. Through carrying an outstanding vision, R&F Property Australia have been growing with the world.

ELENBERG FRASER

Elenberg Fraser – not your average architecture firm. An integrated design practice operating across the Asia-Pacific region, our buildings prove that good design leads to economic, social and cultural benefits. But what makes us so special?

Rather than applying a house style, our buildings are conceived in their own right, responding to their specific site, location and purpose. We don't generalise across projects either – our job is to uncover and express the unique identity of each project, through built form.

The outcome is sensory – architecture that people can feel, not just see. Architecture that makes people think, acknowledging the origins of architecture and its plethora of influences, both ancient and modern.
